CCC Council Call
August 6th, 2015

Attending: Vasant, Lorenzo, Ben, Greg, Ann, Andy, Khari, Helen, Debra, Dan, Limor, Jen, Cynthia, Klara, Kevin, Kathy, Liz

General Background
Fall Council Meeting- Tuesday November 17th
There will be agency visits on Monday or Wednesday.
Think about if there are agencies or contacts that you would like to visit.

CCC Biweekly Call- Tuesday 2-3pm EST
Starting August 25th, 2015 (The next call)

Industry
See Limor's slides
- Goal- to start an open dialogue between industry and computer science researchers
- Additional Comments
    o The meeting had a good broad representation on the industry side
    o Important to remember that different academic institutions have a wide variability of industry connections
        ▪ Berkeley and Stanford are special cases because industry is at their backdoor
        ▪ It is much harder for other schools to get access to industry when they are not surrounded by them
    o The real challenge is figuring out how to bridge the gap between some academic institutions and industry
    o It is important to try to articulate the mutual benefit on both sides
    o There are models out there that fund industry and academia
        ▪ Hard to take them apart and see how they are being successful

IoT
- There was a lot of interest in various aspects of IoT / Computing in the Physical World at the Summer CCC Council meeting
    o Goal- To have a number of focus areas in this space and create some whitepapers
- Meeting once month (as a subgroup of CCC) and coordinate together
    o Using one of the two weeks off during the month to talk
- Plan
    o Meeting September 1st
    o Finalize overview paper
        ▪ Ben sent out an email to those working on the paper, it is being shared by a Google Doc
    o Ask people to think about the scope so that we can be prepared to discuss at the Fall council meeting

- A couple of the groups at NITRD might be interested in this, so once we get a draft together we can share it
- Some of the reports that Ben sent out are missing privacy
    - Cynthia is going to send some material to Ben

Education
- If you have comments on the paper, please send them to Debra and Ann.
- Will have more lengthy discussion later
- NSF already wants to see it

Discussion on rethinking the core
- The council has been very successful at looking at the CS+X space
- Core CS is trying to look at what is the core materials
    - Algorithms in the Field (NSF program)-Trying to engage the community in some of the new aspects in computing
- Some of the visioning activities have been looking at the core areas
    - EDS
    - We need more activities like that
- Connecting with SIGs, sig officers and see what their thoughts were
- Plan
    - Lorenzo and Jen will chat
    - Kathy is interested too
    - Send Jen your ideas
    - Fall meeting will be a time to unpack what we found

Next call will be Tuesday, August 25th at 2pm EST
